

Original Operating Manual:

Retroreflective Light Barriers series ISS/ISN/ISD-L15-OFN/OFP(-OP) IECEx BVS 14.0108X ISN-L15-***-OP

ISD-L15-***-OP

1258

IECEx-Designation Ex db [op is Ga] IIC T6 Gb Ex tb [op is Da] IIIC T100°C Db IP67

Housing M30

Long sensing rangeSeries ISD: ATEX and IECEx certified

ISD: For use in Ex zones (0), 1, 2, (20), 21, 22 optical radiation can operate into Ex Zones 0, 20

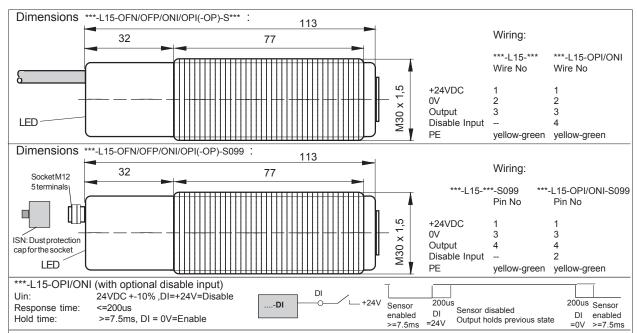

ISN: For use in Ex zones 2, 22

· Robust retroreflective light barrier for industrial applications

Type ISD: II 2(1)G Ex db [op is Ga] IIC T6 Gb, II 2(1)D Ex tb [op is Da] IIIC T100°C Db IP67EC-Certification No. BVS 10 ATEX E130 X DEKRA IECEx Certification No. IECEx BVS 14.0108X

Type ISN: II 3G Ex nA op is IIB T4 Gc, II 3D Ex tc op is IIIA T135°C Dc IP67 Electrical data according to the chart Date of production:

ATEX declaration by manufacturer at 2014/34/EU Numerals 5 to 8 of the serial number (year/calendar week)

(X designation of the certification number: Fibre optics must only be applicated with sensors with certificated limited optical power)

The end of the cable must be connected outside the hazardous location. Check the reliable, noncorrosive holding of the protection earth connection.

Operating Manual / EU-Declaration of Conformity:

Mounting prescriptions Ex Protection:

is necessary to take into consideration the valid international and national rules and regulations (EN 60079-14). The maximum input voltage Um=30VDC must not be exceeded. The local equipotential bonding have to be done. The protective earth (PE) is solid connected with the housing. The cable have to be installed and protected against damages. The cable with termination fittings, or in cable tray systems and installed in a manner to avoid tensile stress at the termination fittings. To connect cables inside hazardous locations only use certificated Ex e housings. All cable terminals must be connected outside hazardous locations. Additional optical lenses are not allowed in hazardous locations. In dust Ex zones, do not operate the sensors without fixed dustproof sealing crew. After adjust the potentiometer, the dustproof sealing crew with undamaged packing ring, must be screwed down. Damaged or lost screws or packing rings must be replaced.

Type ISD-L15-OFP/OFN/OPI/ONI-OP-S***: Applicable in Ex zones 1, 2,

22. The limited optical radiation can operate into hazardous locations 0 or 20.

Type ISN-L15-OFP/OFN/OPI/ONI-OP-S***: Only applicable in Ex zones 2,

Type ISN-L15-OFP/OFN/OPI/ONI-OP-S099: Only applicable in Ex zones Type ISN-L15-OFP/OFN/OFI/ONI-OP-SU99: Only applicable in Ex Zones 2, 22. Do not separate the connector when the supply voltage is connected to the cable. When installing the sensor, the safety lock device must be fitted at the cable connector. The additional adhesive warning label must be fixed to the connector housing at the connection cable. Lumberg cordsets RKTS 5-298/xx (Straight type) or RKWTH 5-298/xx (Right angle type), are allowed ONLY. It is necessary to take into consideration the mounting prescription of the connector manufacturer. In dusty locations, the protection cap for the sensor socket must be fitted, when no connection cable is connected.

General mounting prescriptions:

Do not exceed the maximum ratings. The electrical connections must be exactly as shown in the connection diagram. The cable shield must be connected short. The cable shield should be connected to the protection earth, large-surfaced. Connection cables must not be installed parallel to high voltage cables. Since the angle of beam spread is relatively small, the sensor has to be mounted stable and vibration-free.

Function basics

The sensor can only be used with a retroreflector (triple mirror). The sensor

Ine sensor can only be used with a retrorenector (triple mirror). The sensor works basically as light barrier on reflective mirrors.

Function ***-L15-OFP/OPI(-OP)(-S***)

If the sensor detects reflected light, the output switches to +24VDC and the LED lights up. If no reflected light will be recognized, the LED turns off and the output switches to 0V.

Function ***-L15-OFN/ONI(-OP)(-S***)

If the sensor detects, reflected light, the output switches to 0V and the LED.

If the sensor detects reflected light, the output switches to 0V and the LED turns off. If no reflected light will be recognized, the LED lights on and the output switches to +24VDC

Sensors with disable input, types ***-L15-OPI/ONI(-OP)(-S***):

If several sensors are installed close to another, it is necessary to use sensors with disable input. By using the disable input DI, each sensor can serisors with disable injut. By disting the disable injut bit, each serisor can be controlled in a short reaction time. If only one sensor is activated in the same time, a mutual influence is precluded.

DI= 0V or not connected = emitter enabled

DI= High (24VDC) = emitter disabled

correct function the sensor must be enabled for at minimum >= 7.5ms

(DI=0V). If the DI input will be disabled, the outputs holds the previous output status from the last $\,$ enabled time.

The DI input is PNP compatible.

Sensors with disable input, types ***-L15-OPI/ONI(-OP)(-S***):

If several sensors are installed close to another, it is necessary to use sensors with disable input. By using the disable input DI, each sensor can be controlled in a short reaction time. If only one sensor is activated in the

same time, a mutual influence DI= 0V or not connected is precluded.

= emitter enabled High (24VDC) = emitter disabled

For a correct function the sensor must be enabled for at minimum >= 7.5ms (DI=0V). If the DI input will be disabled, the outputs holds the previous output status from the last enabled time. The DI input is PNP compatible

Maintenance

For a high reliability hold the sensor eyes and the mirror free from sediment. No special maintenance is required. If the sensor eyes or the mirror becomes dirty, they should be cleaned with a non-aggressive cleaning liquid.

Equipment must only be repaired by the manufacturer.

Safety considerations for Class 2 laser devices

The relevant standard is EN 60825-1 "Safety of laser products", see paragraphs 12.5.1 and 12.6.1. It is only necessary to take precautions paragraphs 12.5.1 and 12.6.1. It is only necessary to take precautions to avoid a direct and prolongued staring into the beam. A direct look into the beam is not considered hazardous if the normal eye reflex limits it to a short duration (max. 0.25 s). The laser beam path should be blocked at the end of its useful path when this is reasonably practicable. Additionally, the laser should not be directed at people.

practicable. Additionally, the laser should not be directed at people.

General safety instructions

Series ISN-***_OFP/OFN/OPI/OPI/ONI-OP-S099: "WARNING - EXPLO-SION HAZARD - WHEN IN HAZARDOUS LOCATIONS, TURN OFF POWER BEFORE REPLACING OR WIRING MODULES. DO NOT DISCONNECT EQUIPMENT UNLESS POWER HAS BEEN SWITCHED OFF OR THE AREA IS KNOWN TO BE NONHAZARDOUS". The mounting of the sensor in dusty locations without fixed cordset or protection cap results in a high ignition risk. The sensors must not be used for Accident-Prevention! In worst case the output can change to any state!

When installing and operating with the sensor, it is necessary to take into When installing and operating with the sensor, it is necessary to take into consideration the relevant international and other national regulations:

EN 60079-14, single directive 1999/92/EC.
The sensors are conform to the following standards:
EN IEC 60079-0:2018, IEC 60079-1:2014, IEC 60079-15:2010, IEC 60079-28:2015, IEC 60079-31:2013, EN 60529:2014, EN 61000-4-2 to EN 61000-4-6, EN 61000-6-1/-2, EN 61000-6-4. ATEX Directive: 2014/34/EU, Machine Directive: 2006/42/EG, EMV Directive: 2014/30/EU, RoHS: 2011/65/EG. General notes, disposal:

We reserve the right to modify our equipment. Our equipment is designed such way, that it has the least possible adverse effect on the environment. It neither emit or contain any damaging or siliconized substances and use a minimum of energy and resources. No longer usable or irreparable units must be disposed of in accordance with local waste disposal regulations.
